EASSI (Engineering + Art + Science = Social Impact) is a hub for teams and initiatives aimed at social impact through the merging of the arts, sciences, and engineering. By providing access to and facilitating innovative research, EASSI pursues that impact through public programming, site-specific exhibitions, health and educational activities, and a commitment to interdisciplinarity for K-20 and beyond. The EASSI team is homed in a design, staging and engagement space within The University of Texas at El Paso’s new Interdisciplinary Research Building. Researchers in music, health, computer sciences, sculpture and beyond engage through EASSI to bring communities into our research and to take our research and dialogue to the community. If social impact is your goal, we welcome team members and partners from government, academia and the private sector.
